SPACE I BOOK EXPLOITATION 009/3312

Akademiya nauk SSSR. Astronomicheskoye sovet.

Spustenie' statnoy opticheskoy nablyudeniya iskusstvennykh sputnikov zemli, no. 7 (Bulletin of Stations for Optical Observation of Artificial Earth Satellites, no. 7) Moscow, 1959. 29 p. 500 copies printed.

Resp. Ed.: Ye. E. Gindis; Editorial Secretary: O. A. Severnaya

PURPOSE: The book is intended for scientists engaged in earth-satellite research and for students of astronomy.

COVERAGE: The collection of articles summarizes the results of observations of the Soviet earth satellites. The treatment includes: methods of observation, moments of maximum visibility, devices and cameras used, tables with data. There are numerous figures and some Soviet references. Each article in this collection is accompanied by an English annotation.

Ginsburg, B. E., and V. Arshinov. Observations of Brightness Variations of the Soviet Satellite of the Third Soviet Satellite

The study was conducted at the satellite-observation station attached to the State Pedagogical Institute imeni Lomonosov at Arkhangel'sk. Six passages of the third Sputnik were recorded, in October and November of 1958, with the aim of establishing the mean period of brightness variations. Moments of maximum brightness were determined by a method suggested by V. M. Grigorovskiy. A magnetophone used for this purpose and the method used are described. The method was improved by A. A. Chirsov from Arkhangel'sk.

Korshakich, B. F. Computer Attached to the AT-1 Telescope

The article describes an automatic computer attached to the AT-1 telescope. The apparatus is used for determining equatorial coordinates of satellites. The tests were conducted at the Kuybyshevskiy satellite-observation station of the local state university, where the apparatus was designed. An annotation is enclosed, signed by B. E. Kibbel'son, a senior scientific staff member of the Main Astronomical Observatory, Leningrad-Pulkovo, in which he suggests an improvement in the method of using the described apparatus.

Bozgalavskaya, Ye. Ye. Special Satellite Plate Holder

A plate holder is described for obtaining time marks on the satellite image by means of a moving grating placed in front of the plate. The plate was designed by the author, in collaboration with Engineer S. I. Yekovlev, at the State Astronomical Institute imeni P. K. Shernberg (University of Moscow), and tested by the author in collaboration with I. A. Khasanov.

AUTHOR: Gimmel'farb, B. N.

TITLE: On tying positions of Earth artificial satellites to stars

PERIODICAL: Referativnyy zhurnal, Astronomiya i Geodeziya, no. 4, 1962, 17,
abstract 4A155 ("Byul. st. optich. nablyudeniy iskusstv. sputnikov
Zemli", 1960, no. 10, 8 - 10, English summary)

TEXT: The author described a method of tying positions of an Earth artificial satellite to stars. The method is based on drawing diurnal parallels of stars from observations of their transits across the lines of the graticule in the sight field of an AT-1 telescope and using a measuring grid representing this graticule on the scale of the stellar chart. The advantages of this method are: the orientation of the graticule in the telescope sight field relative to the vertical is of no importance, the knowledge of coordinates of the sight field center is not needed; it is sufficient to have one or two starts within the telescope sight field, and the coordinates of the observational object are derived

TITLE: Look at our earth from space

SOURCE: Priroda, no. 11, 1965, 125

TOPIC TAGS: satellite photography, meteorology, atmospheric cloud, meteorologic satellite

ABSTRACT: This is a review of the book Nasha Planeta iz Kosmosa (Our Planet from Space), published by the Gidrometeoizdat, Leningrad, 1964. The so-called album was compiled by Professor K. Ya. Kondrat'yev, M. G. Kroshkin and V. G. Morachevskiy under the general editorship of Academician Ye. K. Fedorov. The 50-page album, of relatively small format, has text in both Russian and English. Paper is good and type is large and clear. There is a foreword by Academician Fedorov, followed by excerpts from statements made by Soviet cosmonauts on how the earth looks from space. The reviewed notes that a much better job could have been done using the more ample information on this point given in newspaper. The introductory chapter describes the problems which could be solved in meteorology by use of satellites and spaceships. This is followed by 20 color photographs taken from spaceships. Emphasis is on the cloud forms shown on the photographs; very limited information is given on the relief forms shown in the photographs. The reviewer notes

Card 1/2

L 21644-66

ACC NR: AP6011610

that a more apt title for the album would be "Cloud Cover of Our Planet from Space".
The color reproductions are not altogether successful; detail is poor and color 12
plates are poorly superposed. Orig. art. has: 1 figure. [JPRS]

N.M. Dolgoplov, O.D. Levitskiy, Yu.M. Pushcharovskiy, G.A. Semakov,
Ed. of Publishing House: G.I. Mosov; Tech. Ed.: I.N. Guseva

PURPOSE: This book is intended for geologists and petrographers,
particularly those interested in the worldwide distribution of
minerals and the reasons underlying their occurrence.

COVERAGE: On the basis of particular regional studies this book
attempts to establish the rules governing the distribution of
metallic and non-metallic ore deposits. The work includes articles
on the metallogeny of individual minerals, on broad methodological
problems, and on the possibility of predicting the occurrence of
a mineral in the USSR on the basis of its occurrence throughout
the world. Six maps depicting the distribution of a particular
mineral throughout the world are included with the work.
References accompany each article.

11 (43-44) Tables 1

A dry cotton dressing is applied to the perineal region of the child and left over-
night covering the anus. The cotton is then removed and placed in a test tube. The
perianal region is wiped with a wet tampon which is also placed in the test tube.
The material is washed, the washings centrifuged and examined for eggs.

Title : The detection of the virus of Botkin's disease (Infectious Hepatitis) among convalescents and healthy persons (Virus Carriers)

Periodical : Zhur. mikrobiol. epid. i immun. 4, 75-77, Apr 1954

Abstract : Persons who had recovered from infectious hepatitis and persons who had been in contact with infectious hepatitis patients were observed to determine how long convalescents remained virus carriers, whether later relapses of the illness could be considered merely as aggravations of a chronic infection, or whether they were a reinfection, and if it was possible for contacts to act as virus carriers without exhibiting any of the clinical manifestations of the disease. The virus was detected by an agglutination reaction in which the virus was adsorbed on bacteria. It was shown that the virus could be detected for several years after the first appearance of jaundice. In one instance the virus was detected in the blood of a healthy contact who, 2 1/2 months later contracted the disease. No references are cited.

AUTHOR: Gimmel'farb, Ya.K.

TITLE: The Ukrainian Republican Scientific and Practical Conference on the Etiology, Laboratory Diagnosis, Epidemiology and Prophylaxis of Epidemic Hepatitis (Botkin's Disease)

PERIODICAL: Zhurnal mikrobiologii, epidemiologii i immunobiologii, 1959, Nr 9, pp 155-157 (USSR)

ABSTRACT: The Republican Conference on Epidemic Hepatitis was held in Odessa from 2 - 10 October 1958 and was attended by 380 persons, mainly practising epidemiologists from sanitary-epidemiological stations, representatives of all the Ukrainian institutes of epidemiology and microbiology and some of the medical institutes. In addition, delegates attended from the Institutes of Virology and Infectious Diseases of the AMN, USSR, the Leningradskiy institut eksperimental'noy meditsiny (Institute of Experimental Medicine, Leningrad), the Leningradskiy sanitarnogigiyenicheskiy meditsinskiy institut (Sanitary-Hygiene Medical Institute, Leningrad), and also the Moscow, Minsk, Tashkent, Tbilisi, Gor'kiy, Chita, Ashkhabad and Khabarovsk Institutes of

The Ukrainian Republican Scientific and Practical Conference on the Etiology, Laboratory Diagnosis, Epidemiology and Prophylaxis of Epidemic Hepatitis (Botkin's Disease)

Epidemiology and Microbiology and Institutes of Vaccines and Sera. The Conference heard 42 papers, divided among 3 sections. Papers were presented on: the cultivation of the causative agent of endemic hepatitis in developing chick embryos (N.I. Krivaya-Usherenko), in human embryonic hepatic tissue (M.A. Morozenko, Leningrad) and in explanted human embryonic tissue (M.N. Soshnikova and I.A. Karaseva, Tashkent. Ya. K. Gimmel'farb spoke on the complement fixation reaction with non-bacterial adsorbent for the specific diagnosis of Botkin's disease. Verifying observations on this reaction were made by N.B. Proskuryakova and Ye.G. Fedulova of the Institut infektsionnykh bolezney (Institute of Infectious Diseases) of the AMN, USSR, by I.F. Shevchenko (Kiyev), N.M. Karapats (Leningrad), M.D. Aleynik (Gor'kiy), and K.N. Stepanova (Ashkhabad). According to the Odessa Institute of Epidemiology and Microbiology, this reaction can be used for detecting virus antigen in feces (Ye.V. Lychovskaya) and detecting a rise in the complement fixation antibody titer in patients (R.M.

Seletskaya). N.V. Sergeyev and G.A. Sinayko (Moscow) spoke on the diagnostic value of determining the aldolase activity. K.G. Kapetanaki (Leningrad) spoke on the diagnostic value of determining the proconvertin. Professor V.A. Bashenin (Leningrad), M.L. Yablokova (Moscow) and I.M. Gol'shteyn (Dnepropetrovsk) analysed the epidemiological features of Botkin's disease. V.P. Sokol'skaya (Odessa) and D.Kh. Fomina (Kiyev) spoke on the parenteral means of infection with Botkin's disease. V.A. Bashenin, L.A. Stankevich (Kiyev) and A.P. Levchenko (Poltava) presented papers on the chances of air-droplet transmission of infection. Corresponding Member of the AMN, USSR, Professor N.I. Morozkin and A.P. Sokolovskaya (Kiyev) demonstrated the epidemiological importance of abortive and jaundiceless forms of Botkin's disease. Yu.V. Romashko (Khar'kov) and M.D. Aleykin (Gor'kiy) summarized the successful results of gamma-globulin treatment

SOURCE: Zhurnal neorganicheskoy khimii, v. 11, no. 1, 1966, 207-209

TOPIC TAGS: phase equilibrium, phase diagram, phase composition, rubidium compound, cesium compound, acetate, nitrate

ABSTRACT: The ternary reciprocal system of acetates and nitrates of rubidium and cesium was studied. The investigation is a continuation of previously reported work G. G. Diogenov, T. I. Bruk, and N. N. Nurminskiy (Zh. neorgan. khimii, 10, 1496, 1965). The experimental results are presented in graphs and tables (see Fig. 1). It was found that the system represents a reversible-reciprocal system without a pronounced shift in the equilibrium toward any one of the components.
